How to run the code files:

To run our visualization project, open the web browser and then load the `**MainPage.html**` file from our project directory. The main page serves as the entry point, providing links to various visualizations such as interactive charts and maps, each contained in separate HTML files (`subPage1.html`, `subPage2.html`, etc.). The visualizations utilize external libraries like D3.js and Plotly, which are referenced in the HTML. Click through the navigation links to explore different data visualizations.
